AINEMBABAZI #336 VISUALIZATION #1

Different indices are used to determine how developed a place is. I will be using the Human Development index to show the most developed and least developed states in the U.S. I will compare these results along the population density of each state. The HDI is an index that combines the measure of four indicators that is to say life expectancy, literacy education, standard of living and the general well being of the people.

ARGUMENT: Developed states are located in the same region
